                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Koeffler H.P.
gamma; are produced by alternative spitcing.

TISSUE SPECIFICITY: Predominantly expressed in liver. While the alpha form is also expressed in apieen, lung, muscle, prostate an peripheral blood mononuclear ceils, the beta form is expressed in all tissues tested, aibelt weakly.

DISEASE: Defects in TFR2 are a cause of hereditary hemochromatosi type III (HFE3). HFE3 is a disorder of iron hemostasis resulting in iron overload and has a phenotype indistinguishable from that of hereditary hemochromatosis (HH). HH is characterized by abnormai intestinal iron absorption and progressive increase of
                                                                                                                                                                                                                          SUBCELLULAR LOCATION: Type II membrane protein. The b lacks the transmembrane domain and is probably intracal alternarive PRODUCTS: 3 isoforms; alpha (ahown here).
                                                                                                                                                                                                                                                                                                   SUBUNIT: Homodimer
                                                                                                                                                                                                                                                                                                                      FUNCTION: Mediates cellular uptake of transferrin-bound iron i non-iron dependent manner. May be involved in iron metabolism, hepatocyte function and erythrocyte differentiation.
                                                                                                                                                                                                                                                                                                                                                                                                                                          muatations

PATHWAY: PENULTIMATE STEP IN HEME AND PORPNYRIN BIOSYNTNESIS.

SUBGUIT: NOMODIMER.

SUBCELLULAR LOCATION: BOUND TO THE MITOCHONDRIAL INNER MEMBRANE
WITN ITS ACTIVE SITE FACING THE CYTOSOLIC SIDE (BY SIMILARITY).

TISSUE SPECIFICITY: EXPRESSED IN HEART, BRAIN, PLACENTA, LUNG,
LIVER, SKELETAL MUSCLE, KIDNEY, AND PANCREAS.

LIVER SKELETAL MUSCLE, KIDNEY, AND PANCREAS.

1. FUNCTION: CATALYZES THE 6-ELECTRON OXIDATION OF PROTOPORPI IX TO FORM PROTOPORPHYRIN IX.

1. CATALYTIC ACTIVITY: PROTOPORPHYRINGEN.

1. CATALYTIC ACTIVITY: PROTOPORPHYRINGEN.

1. CATALYTIC ACTIVITY: PROTOPORPHYRINGEN.

1. CATALYTIC ACTIVITY: PROTOPORPHYRINGEN.

1. CATALYTIC ACTIVE STEP IN HEME AND PORPHYRIN BIOSYNTHE.

1. SUBCULILAR LOCATION: BOUND TO THE MITOCHONDRIAL INNER ME

WITH ITS ACTIVE SITE FACING THE CYTOSOLIC SIDE.

1. SIMILARITY: BELONGS TO THE PROTOPORPHYRINGEN OXIDASE FAM.

PIL X PAR PRESENTATION OF THE PRESENTATION OF 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cc which is a ligand for the protein coupled orphan receptor designated cc GPR10 (human) or UHR-1 (rat). Cells transformed with a vector containing the ligand polypeptide encoding DNA are used to produce a recombinant cc ligand polypeptide. The ligand polypeptide, and its fragments, modulate function of the pltuitary, central nervous system, pancreas and other ct issues and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a cc sample and to raise antibodies. They may also be used therapeutically, ce.g. to treat senile dementia; halzhelmer's, parkinson's or Huntington's cd disease; foreutxfeld-Jakob disease; polsoning by heavy metals or drugs; cd disease; schizophrenia; disorders of growth hormone secretion; cancer; cr heumatoid arthritis, epilepsy and many others, also to improve post-coperative nutritional status and as vasopressor. Transgenic animals carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide expressing genes, as models of cd disease, for drug screening and as source of cell lines, The ligand conjugation of the polypeptide expressing senses, as models of cd stated sequences; in receptor-binding assays; for production of Ab and created sequences; in receptor-binding assays; for production of Ab and canisters; in drug development; for gene therapy and to develop
cc transgenic animals. Sequences ANM95174 to ANM95178 represent antigenic epiotpes which can be used for the preparation of anti-ligand polypeptide enotypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAW31400
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This peptide contains the partial C-terminal sequence of the synthetic CC ligand polypeptide 19p2-L31 which is capable of binding to a G crosteln-coupled receptor protein. This peptide is used as an antigen to protein-coupled receptor protein. This peptide is used as an antigen to compare rabbit anti-bovine 19p2-L31 antibodies which are used in binding casays. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific case pilications as a prophylactic or therapeutic agent for dementia, cappilications as a prophylactic or therapeutic agent for dementia, cappilication, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, cappilication, byperrolactinaemia, hypercholesterolaemia, thyperglyceridaemia, hyperprolactinaemia, diabetes, cancer, pancreatitis, capping injury, transient brain ischaemia, diabetes, cancer, pancreatitis, spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral captor oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand cappilication activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

They can by used for promoting lactation in a domestic mammal and as an aphrodistac. The agents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmenlopathy, autoimmune disease, prolactinoma, infertility, impotence, amenorathea, gallactorrhaa, acromegally, Chiari-Frommei syndrome, Argonz-del Castilo syndrome, Forbes-Albright Syndrome, Iymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choriocatrinoma, hydatid mole, irruption mole, abortion, unthrifty fertus. Abnormal secondary agents for modulating placents can excharacted, irruption mole, abortion, unthrifty
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAW97229-31 represent a ligand polypeptide derived fragments used to produce antibodies. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a G protein coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing

The antibodles can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences AAY49290-302 represent peptide fragments of the 1992 ligand.
The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 1992 ligand or derivative. The antibodies can be used in diagnosis or to treat opprevent diseases associated with abnormality in the pituitary fund
